Problem:

The existing waterproofing system, installed in 2007 over critical conditioned retail space, was leaking and in need of replacement. The installation time frame was very tight, because the parking deck had to be returned to service as quickly as possible.

Solution:

The owner selected the liquid-applied, PMMA Siplast Terapro VTS System, reinforced for use over occupied conditioned space. The properties of PMMA allowed the project to be completed on schedule. The new Terapro VTS System is designed to withstand the challenging mall parking environment while protecting the retail space below.

Facts in Brief

Siplast System	Reinforced Terapro VTS
Squares	1,380
Architect	Wiss, Janney, Elstner, Associates, Inc - Seattle
Waterproofing Contractor	Commercial Industrial Roofing
